# QuadB TECH

Internship Test

For Freshers: NodeJS Developer Profile

Instructions:

- You have to create this webpage hodlinfo.com by using HTML and CSS and backend using node js.

- Fetch top 10 results from API(https://api.wazirx.com/api/v2/tickers) in your Nodejs express server and store name, last, buy, Sell, volume, base_unit of all top 10 results in the database (you can use any database(**Preferable PostgreSQL**)).
- Then create a route using express to get the above stored data from the database to the frontend.
- Please follow the above two points exactly as mentioned because the result of the test is dependent on it.
- Tip: Use a snip tool for images.

- Do remember that the webpage you build should be identical to almost 90% with the link shared in the first instruction.
- You have 2 days to make this.
- Submit your project via this form: https://docs.google.com/forms/d/e/1FAIpQLSeQ-9PffLbFkzTFfNNv6SqmlyKhV8OT5TJVkPiHBOq9G1-YTQ/viewform
